# <u>Dashboard</u> / <u>My courses</u> / <u>PSPP/PUP</u> / <u>Searching techniques: Linear and Binary</u> / <u>Week10 Coding</u>

Started on	Sunday, 26 May 2024, 11:54 PM
State	Finished
Completed on	Monday, 27 May 2024, 12:06 AM
Time taken	12 mins 27 secs
Marks	5.00/5.00
Grade	<b>100.00</b> out of 100.00

```
Question 1
Correct
Mark 1.00 out of 1.00
```

Write a Python program to sort a list of elements using the merge sort algorithm.

## For example:

Input	Result
5	3 4 5 6 8
6 5 4 3 8	

# Answer: (penalty regime: 0 %)

```
1 def merge_sort(arr):
        if len(arr)<=1:</pre>
3
            return arr
 4
        mid = len(arr)//2
5
        1 = arr[:mid]
 6
        r = arr[mid:]
 7
        1 = merge_sort(1)
8
        r = merge_sort(r)
        return merge(1,r)
9
    def merge(left,right):
10 🔻
11
        merged = []
12
        li,ri=0,0
        while li<len(left)and ri<len(right):</pre>
13
14
            if left[li]<right[ri]:</pre>
15
                merged.append(left[li])
16
                li+=1
17
            else:
18
                merged.append(right[ri])
19
                ri+=1
        merged.extend(left[li:])
20
21
        merged.extend(right[ri:])
22
        return merged
23
    n = int(input())
24
    arr = list(map(int, input("").split()))
25
    sorted_arr = merge_sort(arr)
   print(' '.join(map(str,sorted_arr)))
```

	Input	Expected	Got	
~	5 6 5 4 3 8	3 4 5 6 8	3 4 5 6 8	~
~	9 14 46 43 27 57 41 45 21 70	14 21 27 41 43 45 46 57 70	14 21 27 41 43 45 46 57 70	~
~	4 86 43 23 49	23 43 49 86	23 43 49 86	~

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

```
Question {\bf 2}
Correct
Mark 1.00 out of 1.00
```

To find the frequency of numbers in a <u>list</u> and display in sorted order.

## **Constraints:**

1<=n, arr[i]<=100

# Input:

1 68 79 4 90 68 1 4 5

## output:

12

42

5 1

68 2

79 1

90 1

# For example:

lr	ıpı	ut				R	esult
4	3	5	3	4	5	3	2
						4	2
						5	2

**Answer:** (penalty regime: 0 %)

```
1 A = list(map(int, input().split()))
for B in sorted(set(A)):
print(B. A.court's)
```

	Input	Expected	Got	
~	4 3 5 3 4 5	3 2	3 2	~
		4 2	4 2	
		5 2	5 2	
~	12 4 4 4 2 3 5	2 1	2 1	~
		3 1	3 1	
		4 3	4 3	
		5 1	5 1	
		12 1	12 1	

	Input	Expected	Got	
~	5 4 5 4 6 5 7 3	3 1	3 1	~
		4 2	4 2	
		5 3	5 3	
		6 1	6 1	
		7 1	7 1	

Passed all tests! 🗸

Correct

Marks for this submission: 1.00/1.00.

```
Question 3
Correct
Mark 1.00 out of 1.00
```

Bubble Sort is the simplest <u>sorting</u> algorithm that works by repeatedly swapping the adjacent elements if they are in wrong order. You read an <u>list</u> of numbers. You need to arrange the elements in ascending order and print the result. The <u>sorting</u> should be done using bubble sort.

Input Format: The first line reads the number of elements in the array. The second line reads the array elements one by one.

Output Format: The output should be a sorted <u>list</u>.

## For example:

Input	Result							
6 3 4 8 7 1 2	1 2 3 4 7 8							
5 4 5 2 3 1	1 2 3 4 5							

**Answer:** (penalty regime: 0 %)

```
1 def bubble_sort(arr):
 2
        n = len(arr)
3 •
        for i in range(n):
            for j in range(0, n-i-1):
4
                if arr[j]>arr[j+1]:
                    arr[j],arr[j+1]=arr[j+1],arr[j]
6
7
    n = int(input())
   arr = list(map(int,input().split()))
8
   bubble_sort(arr)
10 print(' '.join(map(str,arr)))
```

	Input	ı	Ex	кр	ec	te	d		G	ot					
~	6 3 4 8 7 1 2	:	1	2	3	4	7	8	1	2	3	4	7	8	<b>~</b>
~	6 9 18 1 3 4 6	:	1	3	4	6	9	18	1	3	4	6	9	18	<b>~</b>
~	5 4 5 2 3 1	:	1	2	3	4	5		1	2	3	4	5		<b>~</b>

Correct

Marks for this submission: 1.00/1.00.

```
Question 4
Correct
Mark 1.00 out of 1.00
```

Given an listof integers, sort the array in ascending order using the Bubble Sort algorithm above. Once sorted, print the following three lines:

- 1. <u>List</u> is sorted in numSwaps swaps., where numSwaps is the number of swaps that took place.
- 2. First Element: firstElement, the *first* element in the sorted <u>list</u>.
- 3. Last Element: lastElement, the *last* element in the sorted <u>list</u>.

For example, given a worst-case but small array to sort: a=[6,4,1]. It took 3 swaps to sort the array. Output would be

```
Array is sorted in 3 swaps.

First Element: 1

Last Element: 6
```

### **Input Format**

The first line contains an integer, n , the size of the  $\underline{\text{list}}$  a .

The second line contains n, space-separated integers a[i].

#### **Constraints**

- · 2<=n<=600
- $\cdot$  1<=a[i]<=2x10<sup>6</sup>.

#### **Output Format**

You must print the following three lines of output:

- 1. <u>List</u> is sorted in numSwaps swaps., where numSwaps is the number of swaps that took place.
- 2. First Element: firstElement, the first element in the sorted list.
- 3. Last Element: lastElement, the *last* element in the sorted <u>list</u>.

## Sample Input 0

3

1 2 3

# Sample Output 0

<u>List</u> is sorted in 0 swaps.

First Element: 1

Last Element: 3

## For example:

Input	Result
3 3 2 1	List is sorted in 3 swaps. First Element: 1 Last Element: 3
5 1 9 2 8 4	List is sorted in 4 swaps. First Element: 1 Last Element: 9

Answer: (penalty regime: 0 %)

```
def bubble_sort(arr):
 1 .
 2
        n = len(arr)
 3
        num swaps = 0
 4
 5
        for i in range(n):
 6
 7
            swapped = False
 8
 9
            for j in range(0, n - i - 1):
10
                 if arr[j] > arr[j + 1]:
11
```

```
12
                    arr[j], arr[j + 1] = arr[j + 1], arr[j]
13
                    num_swaps += 1
                    swapped = True
14
15
16
            if not swapped:
17
18
                break
19
20
        return arr, num_swaps
21
22
23
    n = int(input())
24
    a = list(map(int, input().split()))
25
26
27
    sorted_list, num_swaps = bubble_sort(a)
28
29
30
    print(f"List is sorted in {num_swaps} swaps.")
   print(f"First Element: {sorted_list[0]}")
31
32 print(f"Last Element: {sorted_list[-1]}")
```

	Input	Expected	Got	
<b>~</b>	3 3 2 1	List is sorted in 3 swaps. First Element: 1 Last Element: 3	List is sorted in 3 swaps. First Element: 1 Last Element: 3	~
<b>~</b>	5 1 9 2 8 4	List is sorted in 4 swaps. First Element: 1 Last Element: 9	List is sorted in 4 swaps. First Element: 1 Last Element: 9	~

Passed all tests! <

Correct

Marks for this submission: 1.00/1.00.

10

```
Question 5
Correct
Mark 1.00 out of 1.00
```

An <u>list</u> contains N numbers and you want to determine whether two of the numbers sum to a given number K. For example, if the input is 8, 4, 1, 6 and K is 10, the answer is yes (4 and 6). A number may be used twice.

## **Input Format**

The first line contains a single integer n, the length of <u>list</u>

The second line contains n space-separated integers, <u>list[i]</u>.

The third line contains integer k.

## **Output Format**

Print Yes or No.

## **Sample Input**

7 0 1 2 4 6 5 3

## **Sample Output**

Yes

#### For example:

Input	Result
5 8 9 12 15 3 11	Yes
6 2 9 21 32 43 43 1 4	No

# Answer: (penalty regime: 0 %)

```
1 v def pair(arr, k):
        seen = set()
 3 •
         for num in arr:
 4
            complement = k-num
 5 ,
            if complement in seen:
 6
                 return True
 7
            seen.add(num)
 8
        return False
    n = int(input())
9
10
    arr = list(map(int, input().split()))
11
    k = int(input())
12 ,
    if pair(arr, k):
13
        print("Yes")
    else:
14 •
15
        print("No")
```

	Input	Expected	Got	
~	5 8 9 12 15 3 11	Yes	Yes	~
~	6 2 9 21 32 43 43 1 4	No	No	~
~	6 13 42 31 4 8 9 17	Yes	Yes	~

Passed all tests! 🗸

Correct

Marks for this submission: 1.00/1.00.
